| 1 |  |  |  |  |  |  |  |  |

Instructions: Shade some empty cells black so that the grid is divided into white areas, each containing exactly one number and with the same area as that number. Two white areas may only touch diagonally. All black cells must be connected with each other, but no $2 \times 2$ square of cells can be entirely shaded black.

For Map: For the cells containing blue circles, if that cell is part of a white area, copy the size of the area into the appropriate blue circle on the map. If the cell is part of a black area, copy " 8 ".
